# GHX Marketplace + Oracle
Partnering to Deliver Healthcare Supply Chain Transformation

Healthcare Focused

GHX Marketplace is purpose-built for healthcare to reduce the total cost of supply chain.

GHX Marketplace plays an important role in enabling health systems to achieve their digital transformation goals by delivering a solution designed to address healthcare's unique supply chain needs. Today, less than 45% of spend is managed through the ERP item master, less than 65% of spend is tied to a valid, active contract and more than 30% of transaction lines have an error.

Partnership Value Highlights

Maximized Savings:
GHX Marketplace maximizes supply chain savings by simplifying the procurement workstreams for supplies, inventory, physician preference items (PPI), consignment/bill-only items, capital, as well as many purchased services.

Directed Buying:
GHX Marketplace gives users a modern, easy-to-use ordering platform that directs purchasing activity to the preferred sources at the right price; increasing supply chain's span of control and enforcing compliance on each purchasing decision from the front end.

Formulary Management:
GHX Marketplace is supply chain's virtual item formulary, and this is the backbone of directed buying. The virtual item formulary provides the tools needed to centrally manage all contracted items and prices.
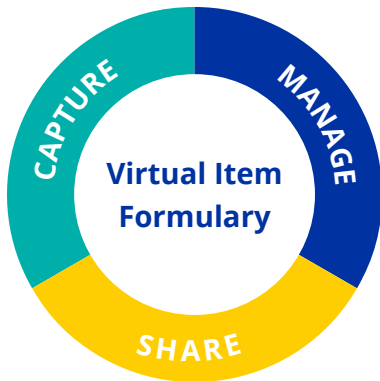

Value Realized:
GHX Marketplace is complimentary to Oracle and extends the value of your ERP investment. The procurement platform acts as an extension of Oracle's procurement workflows; orchestrating the required data flow paths across the supply chain network.

One united GHX platform, directing the future of supply chain from the front end.

Linked with GHX's industry-leading platform, GHX Marketplace delivers a front-end, directed buying experience, enabling better accuracy and control over thousands of daily purchasing decisions to lower supply chain operating costs. And by integrating their platforms and industry expertise, GHX and Oracle are helping healthcare providers achieve their supply chain goals while preparing for future disruptions.

Virtual Item Formulary
