

Integrating Credentialing Data Into Value Analysis Workflows

Streamlining Processes is Crucial to Accelerating Product Decisions and Cost-Saving Standardization or Sourcing Initiatives

When a new product request comes into your system, verifying a vendor's credentialing status often means switching between multiple systems to advance the request or follow up with the vendor, which takes time and bandwidth.

Supply chain teams can receive hundreds of new product requests per year. Although the process of verifying the credentialing status on a request or value analysis project may only take five minutes, it adds up quickly.

What else could your team be doing with that time?

Value Analysis & Strategic Sourcing Workflow with Integrated Vendor Credentialing Data

GHX's integrated solutions accelerate vendor credential checks. Check a vendor's status directly from your value analysis software when it is connected to your Vendormate credentialing account — no more navigating between systems!

GHX Value Analysis & Strategic Sourcing

GHX Value Analysis & Strategic Sourcing helps enhance clinical outcomes and drives cost savings. With a robust research database, it has helped saved 41,000 FTE (full-time equivalent) workdays across its customer base and captured nearly 17,000 new product requests, providing support to 12,000 product decisions. In 2022 alone, GHX helped clients cumulatively save \$86M.

GHX Vendormate

GHX Vendormate aligns health system supply chains with their credentialing compliance standards through a unique vendor credentialing and access management solution. In today's changing healthcare landscape, it is more important than ever to credential everyone who does business with your health system—even those who may not do work or visit on-site. Vendormate helps create a culture of compliance with people, data, processes, and technology that help improve safety and reduce business risk. For those who do visit your facility, kiosks streamline vendor and visitor check-ins while adhering to infection control protocols.

Reduce Process Friction.

Accelerate Product Decisions.

**Reclaim Time for
High-Value Initiatives.**
