Healthcare Supplier

GHX ePay Implementation

In a world where technology implementation can be complicated and time-consuming, implementing GHX ePay is refreshingly simple.

You can set up and start processing payments within one to three weeks from the first implementation meeting. You will supply the required banking information, and GHX will configure ePay to your specifications. Getting payment processing started requires a one-time exchange of banking information. From there, efficiency grows with a one-to-many connection with your customers.

GHX ePay helps to make payment processing efficient and cost effective for the healthcare industry.

Get started today!

Steps To Success

GHX
GHX will introduce you to your Implementation Consultant, who will guide you throughout the entire process.

CUSTOMER
You will identify your stakeholders and expected go-live date. Your team should include Accounts Receivable and associated management roles as you see appropriate.

GHX
Weekly calls during implementation to keep everything moving along and provide status updates for milestones in the project plan.

GHX
The GHX Implementation Team will conduct a spend analysis and identify a priority list of your customers as part of the pre-sale process. The priority list will be entered in the system for the initial rollout.

GHX
The GHX Implementation team will notify your initial group of customers of the go-live date. New customers can easily be added at a later date.

Steps To Success *Continued*

GHX

From this point, you will provide the GHX Implementation Team with the bank account information. The GHX Implementation team will set up your specified configuration on the ePay platform and conduct a penny-test with the bank account.

GHX

Training will be completed after go-live and Accounts Receivable users will be set up on the ePay platform.

CUSTOMER

Once a customer sends a first payment file, you will be able to review with the GHX Implementation Team and start to enjoy the benefits of ePay! Regular reviews with GHX will help keep customer participation increasing and fine-tune business processes for payment automation.
